Education

Nova School of Business and Economics (Nova SBE) Sep 2022 – Jun 2026
BSc in Economics *Lisbon, Portugal*

- Final Grade: 14.4/20 (Good)
- Academic Research: School ICT rules and mathematics achievement gaps (PISA 2022, WLS, 19/20); Innovation disparities between Eastern and Western EU countries (Eurostat 2017, OLS, 18/20)
- Award: Altice Portugal Merit Scholarship (2022)

Berlin School of Economics and Law (HWR Berlin) Mar 2025 – Aug 2025
Erasmus+ Exchange Semester *Berlin, Germany*

- Final Grade: 16.3/20 (German scale: 2.1, Gut)

Work Experience

Economist Trainee Sep 2026 – Present
Energy Services Regulatory Authority (ERSE) *Lisbon, Portugal*

- Contribute to Regulatory Impact Assessments (RIAs) in the electricity, natural gas and fuel sectors, comparing the costs, benefits and risks of alternative regulatory options under OECD and European Commission guidelines
- Analyse energy market data to estimate the impact of new measures on consumers, firms and competition
- Member of a CEER working group, tracking new EU energy regulation and co-developing a paper comparing RIA methods across European regulators

Data Analyst Summer Intern Jul 2024 – Aug 2024
OSCAR (home services app) *Lisbon, Portugal*

- Built Looker and Excel dashboards tracking supply shortages across 150+ services and 2,400+ localities, informing operational decisions
- Supported expansion into 3 new Portuguese regions, coordinating cross-regional recruiting and content efforts that contributed to a 60% increase in GMV (gross merchandise value) in the following months

Projects

European Electricity Tracker | *Python, SQL, Streamlit, GitHub Actions* Live app · Code

- Built a live app that downloads hourly day-ahead prices for 26 European markets every day (ENTSO-E API, SQLit) and maps tomorrow's prices across Europe
- Found that negative-price hours rose from 829 in 2019 to 7,744 in 2025 and that solar now earns 50 to 65% of the average price; in Portugal, each extra point of wind and solar cuts the price by about 0.94 €/MWh

Fuel Price Asymmetry in Portugal | *Python, statsmodels, Tableau* Dashboard · Code

- Tested whether fuel prices in Portugal rise faster than they fall, using weekly data from 2019 to 2026 and asymmetric pass-through and error correction models
- Found that petrol stations pass on cost rises and falls equally (diesel pass-through of 0.90 for rises vs 0.85 for falls); the only asymmetry, diesel against crude oil, disappears once 2022 is left out

Technical Skills

Programming: Python (pandas, statsmodels, matplotlib), R, SQL

Tools: Tableau, Excel (Power Query, pivot tables), Git/GitHub, Looker

Certifications: Microsoft Office Specialist, Excel (2023); Python Essentials, Cisco (2024)

Languages

Portuguese (native), English (C1), Spanish (B1), German (A2)

Extracurricular Activities

Volunteering: International Medical Assistance (AMI), 2022–2025; Food Bank Against Hunger, 2013–2021

Activities: Lifeguard at Supertubos Beach, Peniche (2023–2024); Competitive swimmer (U18); Music Conservatory, grade 5; President of the Student Union Assembly (2020–2021)
